## Innovation

Southern Cross provides decades of industry field knowledge and best practices with the latest in innovative advanced gas leak detection technology.

## Experience

We provide the best of both worlds combining traditional leak detection models with technological benefits of a best-in-class solution. We work with you to understand and provide the best solution from our tool kit.

## Benefits

Our advanced gas leak detection solutions provide a comprehensive asset management solution that accelerates risk mitigation and maximizes efficiency to deliver comprehensive on-time solutions safely.

## Advanced Gas Leak Detection

Using a vast array of advanced technology tools combined with our best in class industry experience, Southern Cross delivers comprehensive leak detection and asset management solutions. The system measures atmospheric and meteorological conditions, methane plume signatures and uses advanced dynamic algorithms to compute the location of natural gas leaks.

Our state-of-the-art work order and workforce management solutions deliver unparalleled efficiency with electronic capture of date, time stamps and accurate GPS-enabled breadcrumbing and geospatial validation.

- High sensitivity gas leak detection technology with customized data analytics
- Risk ranking analytics prioritizes most critical leaks and provides better characterization of gas asset infrastructure
- Comprehensive data-driven asset management solutions
