Advanced Mobile Leak Detection

Using a vast array of advanced technology tools combined with our best in class industry experience, Southern Cross delivers comprehensive leak detection and asset management solutions. The system measures atmospheric and meteorological conditions, methane plume signatures and uses advanced dynamic algorithms to compute the location of natural gas leaks.

Our state-of-the-art work order and workforce management solutions deliver unparalleled efficiency with tracking of workforce, validated performance against GIS data, and leak tracking and quantification.

- Data collection and analytics platform for leak & emissions detection
- Data analytics with actionable surveying
- Ability to survey in adverse weather conditions
- High sensitivity gas leak detection technology
- Comprehensive assest management solutions
