

### Southern Cross offers Cathodic Protection Services for our customers.

Reliability, Quality and Safety are the hallmarks of our practice. We support all sizes of projects including complete project management services. Our installation process results in minimal traffic disruptions and public inconvenience, not to mention overall efficiency and cost savings. What's more – avoidance of heavy construction type equipment results in a much lower carbon footprint and minimal environmental impact of the whole installation process.

### Our Cathodic Protection Services include:

- Installing Anodes
- Attaching ETS (Electric Test Stations)
- Attaching wires and clearing shorts
- Pipe coating
- Repair/Replace ground surface and pavement restoration

## Why Southern Cross?

We have a proud reputation as an industry with utilities across North America for over seventy years, thanks to our excellent reputation. With a strong focus on prioritizing safety, range of comprehensive construction

and project management services. With our wide range of highly trained technicians and advanced technology, Southern Cross will make your next Cathodic Protection project simple, more efficient, and safer.
